Spotting the best deal

**There are many ways to work out percentages.
This is just one example that you can use every day**

A monthly train ticket costs £250.00. The price increases by 10%. What's the new price?

Step 1:

Divide £250 by 100 to find 1%
 $£250 \div 100 = £2.50$

Step 2:

Multiply £2.50 by 10 to find 10%
 $£2.50 \times 10 = £25$

Step 3:

Add this increase to the original to get the new price
 $£250 + £25 = £275$

School level: KS3/S1-S2
